

## Quick Installation Guide

## ECO-DC Wifi Digital Clock's

The WiFi clock has default network settings, which are used to connect the clock to a computer with Hotspot function.

Once this connection to the WiFi clock is established, the clock network settings must be changed to the final settings of customers existing WiFi network.

Step	To Do	Notes
Step 1.	<ul> <li>To Do</li> <li>Connecting to the WiFi clock using the Hotspot function of your computer.</li> <li>1. Use a windows 10 OS based computer that is capable of WiFi.</li> <li>2. Open the Mobile Hotspot menu on your computer</li> <li>3. Configure your mobile hotspot with the default settings of the WiFi clock: Network Name: MOBA-WIFI</li> </ul>	Notes Mobile hotspot Share my Internet connection with other devices On Share my Internet connection from Wi-Fi Share my Internet connection over
	<ul> <li>Password: hgfedcba Network Band: 2.4 GHz</li> <li>4. Turn on the hotspot on your computer</li> <li>5. Plug in the clock to mains power</li> <li>6. Set value 2 in item P15 in the main MENU. Please see clock manual for instruction.</li> <li>7. Check on the computer if the WiFi clock is connected correctly to the hotspot. You can Check also the displayed MAC address to ensure the connection of the right clock.</li> </ul>	<ul> <li>Wi-Fi</li> <li>Bluetooth</li> <li>Network name: MOBA-WIFI</li> <li>Network password: hgfedcba</li> <li>Network band: 2.4 GHz</li> <li>Edit</li> <li>Devices connected: 0 of 8</li> </ul> Network name: MOBA-WIFI Network password: hgfedcba Network password: hgfedcba Network password: hgfedcba Network band: 2.4 GHz Edit Devices connected: 1 of 8 Devices connected: 1 of 8 Device name IP address Physical address (MAC) MOBATIMEB8AD60 192.168.137.71 d4:ca:6e:b8:ad:60
2.	Now connect to the clock with telnet. 1. Install the freeware "Putty" on your computer. Make sure that	(Example: Putty <u>https://www.putty.org/</u> )
© MO	BATIME 1	/ 3 QE-801301.01

t c 2. C t F a t 3. C P N c	<ul> <li>the software is installed correctly on your computer.</li> <li>Connect with Putty (connection type telnet) to your WiFi clock. For this, you need the clocks IP address which is displayed on the hotspot configuration overview.</li> <li>Click "Open" and enter the Password: 718084</li> <li>Now you have access to the clock via the putty tool.</li> </ul>	Image: Session       Image: Session         Image: Category:       Basic options for your PuTTY session         Image: Session       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Specify the destination you want to connect to         Image: Sector Terminal       Sector Terminal         Image: Sector Terminal       Save         Image: Secore
3.1 DHCP	Option 1: Integrate the WiFi clock into the desired WiFi network with DHCP. For this, the information about your WiFi network with DHCP is needed: a. SSID b. Password c. Security/ encrypt. type d. NTP Server e. Network operation mode: unicast, DHCPv4 f. Change Wifi Mode to the above defined network	<pre>MOBATIMEB8AD 192.168.137.124 d4:ca:6e:b8:ad:60 Example for WiFi network settings:      wifi -s mobatime     wifi -p 123456789     wifi -w 4     conf -ul ntp.mobatime.com     conf -p8:03     wifi -m 1     exit         - Security type         0-None, l-Reserved, 2-Reserved,         3-WPA 4-WPA2 5-WPA/WPA2</pre>
	<ul> <li>Use the following commands for the</li> <li>WiFi clock configuration.</li> <li>1. Putty: wifi –s <ssid> <ul> <li>As example wifi –s Mobatime</li> <li>Press "enter" and continue with</li> <li>step 2 - 8</li> </ul> </ssid></li> <li>Putty: wifi –p <password> <ul> <li>Putty: wifi –w <encryption li="" type<=""> <li>see on the printscreen&gt; <ul> <li>Putty: conf –u1 <ntp server=""></ntp></li> </ul> </li> </encryption></li></ul></password></li></ul>	6-LEAP, 7-PEAP

	5. <b>Putty:</b> conf –p8:03	After "exit" this message appears, which is normal.
	6. <b>Putty:</b> wifi –m 1	PuTTY Fatal Error
	7. Putty: exit	
	With the command "exit" the	Natural array Software caused connection short
	configuration settings will be submitted	Network error: Software caused connection abort
	to the WiFi clock. Your WiFi clock is now	
	connected to your local WiFi network	Or
	connected to your local with network.	
3.2	Option 2:	
Static	Integrate the clock into the desired	> wifi -s mobatime
	WiFi with static IP.	> wifi -p 123456789
	For this, the information about your	> wifi -w 4
	wifi without DHCP is needed:	> conf = n8:02
		conf _i 102 169 1 2
	d. SSID	> CONT -1 192.168.1.2
	D. Password	> conf -s 255.255.255.0
	c. Security/ encrypt. Type	> conf -g 192.168.1.1
	a. Network operation	<pre>&gt; conf -ul ntp.mobatime.com</pre>
	mode: unicast, manual	> conf -d 8.8.8.8
	network settings	> wifi -m l
	e. IP	
	f. Gateway	
	g. Subnetmask	Comunity turns
	h. NTP Server	- Security type
	i. DNS Server	0-None, 1-Reserved, 2-Reserved,
	i Change Wifi Mode	3-WPA, 4-WPA2, 5-WPA/WPA2,
	j. Change win Wode	6-LEAP, 7-PEAP
	Use the following commands for the	
	WiEi clock configuration	
	1. Putty: wifi –s <ssid></ssid>	
	As example witi –s iviobatime	
	Press "enter" and continue with	
	step 2 - 11	
	<ol><li>Putty: wifi –p <password></password></li></ol>	
	3. <b>Putty:</b> wifi –w <encryption th="" type<=""><th></th></encryption>	
	see on the printscreen>	
	4. <b>Putty:</b> conf –p8:02	
	5. <b>Putty:</b> conf –i <ip></ip>	
	<ol><li>Putty: conf –s <subnet mask=""></subnet></li></ol>	After "exit" this message appears, which is normal, because of lost
	7. <b>Putty:</b> conf –g <gatewav></gatewav>	network connection.
	8. <b>Putty:</b> conf –u1 <ntp server=""></ntp>	PuTTY Fatal Error
	9. <b>Putty:</b> conf –d <dns server=""></dns>	
	10. <b>Putty:</b> wifi –m 1	
	11 Putty: evit	Network error: Software caused connection abort
	With the command "evit" the	
	configuration cottings will be submitted	
	to the WiFi clock Your WiFi clock is	ОК
	to the WIFI Clock. Your WIFI clock is now	
	connected to your local WiFi network.	
5.	Configure the correct time zone.	
	1. Connect to your clock with a	> conf -p6:11
	telnet client	
	<ol><li>Putty: conf –p6:<zonetable></zonetable></li></ol>
