

MULTI-PURPOSE TIME SERVER

DTS 4138.TIMESERVER

The DTS 4138.timeserver is a combined time distribution and synchronization device with dual network interface. With its high-precision and intelligent concept for redundant operation, it offers a high degree of reliability and availability.

HIGHLIGHTS

HIGH-PERFORMANCE NTP SERVER

The DTS 4138 can reply to more than 1'500 NTP and SNTP requests per second (up to 7'500 clients depending on NTP client configuration).

REDUNDANT LINK

For utmost availability, two DTS 4138 can be connected to offer redundant master-slave operation with automatic switch over in case of an error.

HIGH ACCURACY

The DTS 4138 can receive all GNSS signals (GPS, Galileo, GLONASS, BeiDou), guaranteeing utmost accuracy and availability. For GNSS security, multiple constellations can be used in parallel.

LEGACY OUTPUTS

The DTS 4138 supports legacy outputs such as IRIG, DCF, pulse, and frequency.

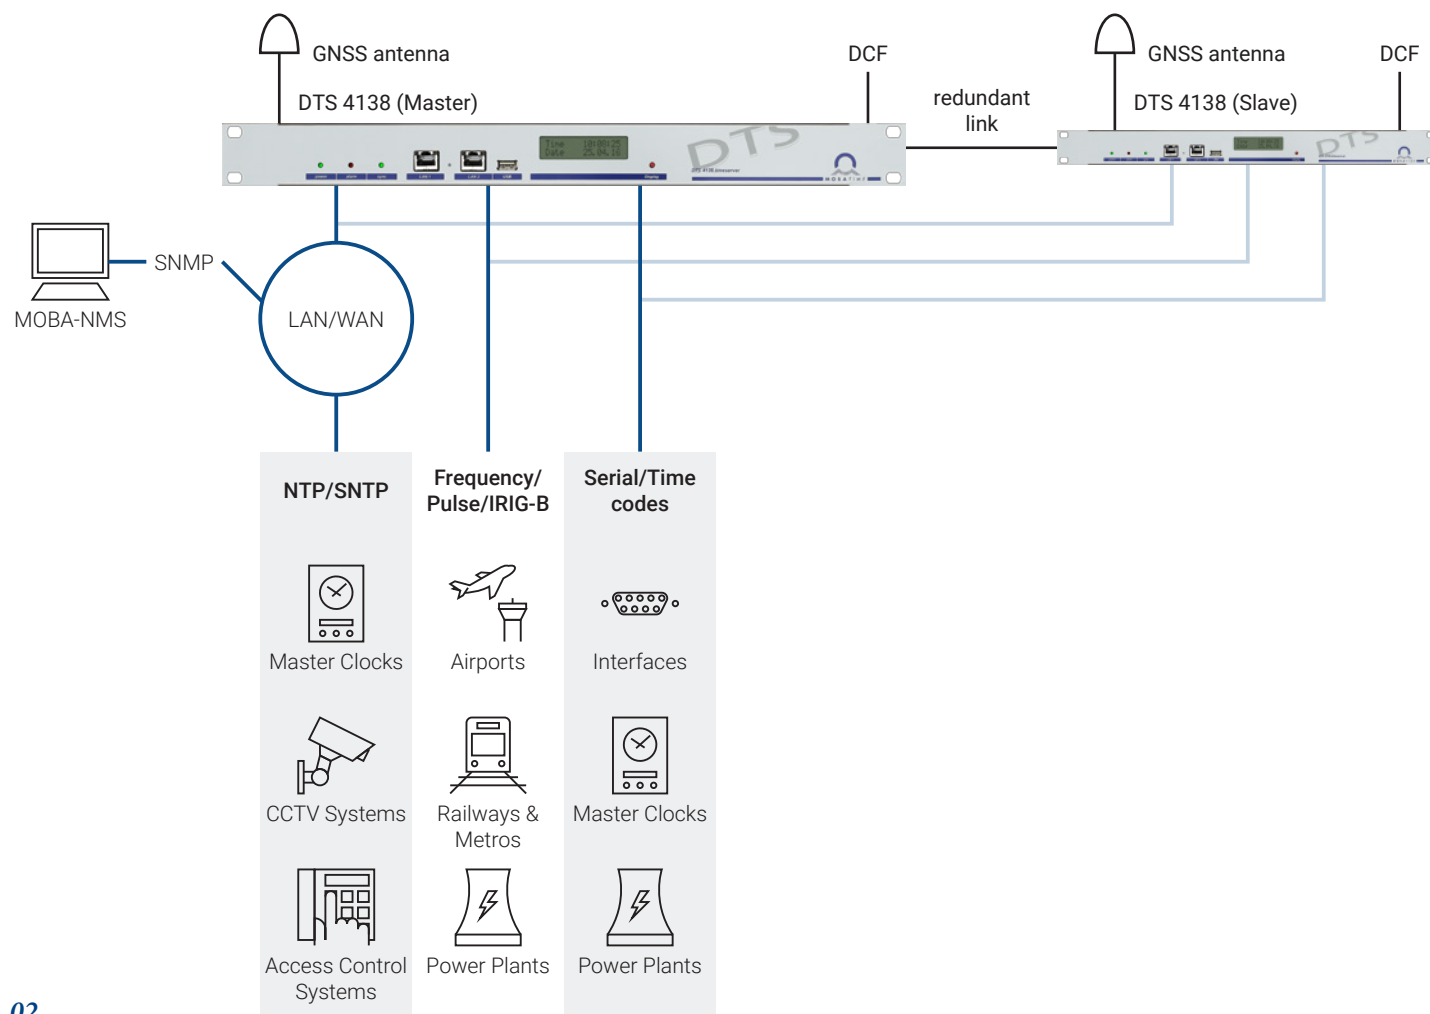

NETWORK MANAGEMENT SYSTEM

MOBA-NMS

The DTS 4138.timeserver can be fully monitored, configured and controlled using the Mobatime Network Management System software (MOBA-NMS).
